

Name:
Tickles

Date:

When solving the equation $5(7x^2 + 6) - 2 = 6x^2 + 4$, Jakim wrote $5(7x^2 + 6) - 2 = 6x^2 + 6$, as their first step. Which property justifies Jakim's first step

- (1) Commutative property of equality
- (2) Distributive property of equality
- (3) Multiplication property of equality
- (4) Addition property of equality
